

Bolt On Toothbar

Part # BOTB-(bucket inside dimension) Example: BOTB-60 is a 60" Toothbar

Berlon uses a heavy duty shank with fabricated replaceable teeth, held on by flex pins.

Berlon ***Bolt on Tooth Bars*** have many valuable features such as easy on, easy off. They have no V-groove to pack tight with mud which, when dried, turns into a concrete like material.

TOOTH BARS ARE AVAILABLE IN ALL SIZES

Berlon's ***Bolt on Tooth Bars*** have a built in adjustment to pull the teeth tight onto the edge for a snug fit, even as the cutting edge wears.

Berlon Tooth Bar Installed on a Bucket.

Pull Up Bolt Design Doing Its Job!

NOTE: When ordering a Bolt on Tooth Bar for other manufacturer's buckets, you MUST let Berlon know the inside dimension of the bucket at the narrowest point! (6" - 8" behind the leading edge)
