

Mats

Part # MAT-28 (2' x 8') or MAT-48 (4' x 8')

Advantages

- Better traction than plywood
- Will not absorb water and become extremely heavy like plywood
- Bottom side of the mats has ground spikes, not smooth like plywood
- Resists weathering and pest infestation unlike plywood
- Handles allow for easier handling and won't give you splinters like plywood
- Stackable design
- 2 sizes available: 2' x 8' and 4' x 8'
- Tread pattern provides extra grip when driving on

Note: These are NOT bridging devices. The ground underneath the mats should be capable of supporting the weight of the vehicle traveling over them. The mats help distribute weight to a larger ground surface area and provide additional traction while protecting the ground beneath it.

BERLON MATS VS. PLYWOOD

	BERLON MATS	PLYWOOD
Traction	Aggressive M Tread & Ground Spikes	No traction, smooth
Flexibility	Lots! No Peeling Layers	Little, flexing peels wood layers
Weight	Lightweight Design	Heavy, especially when wet
Waterproof	Yes	No, will eventually decay and break
Lifetime	Years	Weeks to Months (depending on usage)
