

Mini Tooth Bar

Part # MITB-(bucket inside dimension) Example: MITB-48 is a 48" Mini Tooth Bar

- Berlon's **Mini Tooth Bar** is a much lighter and more economical tooth bar designed for users with smaller skid loaders or compact tractors.
- This tooth bar is great for home owners or hobbyists to use with light duty everyday work.
- Its lightweight teeth and bar are scaled so that the tooth bar does not seem oversized and disproportionate to the bucket and skidloader you are using.
- Just like Berlon's normal bolt on tooth bars, the **Mini Tooth Bar** has an easy on easy off 2 bolt design and no V-groove for mud to pack tight into.

The **Mini Toothbar** is designed for Compact Tractor Loaders and Garden Tractors with loaders!

Note: Before ordering we must know what the Inside Dimension of the bucket is and how thick the base edge is.
