

Extended Lip Scrap End Grapple Bucket

Part # BELPK-6 (width) Example: BELPK-6-60 is a 60" Extended Lip Scrap End Grapple Bucket

Hydraulic Hoses

Berlon runs standard hydraulic hoses from one cylinder to the other. All lines will move with oil surges. By using common hoses (that you are able to buy anywhere) you will save time and money by not having to special order, wait and pay top dollar from a specific dealer/manufacturer.

BELPK-6

TWO GRAPPLE CLAWS THAT WORK INDEPENDENTLY

Cushioning Valve

Cushioning valve is standard to prevent damaging the unit.

Scrap End

Side Cutting Edge

Wrap around side cutting edge comes up 3" high, 6" wide and 3/4" thick. Scrap End is 3/8" thick.

Main Pivot Tube (Grease Zerks)

The main pivot tube has 4 grease zerks. This pivot tube is the full length of the bucket making it very strong; unlike grapple pivot pins used by other manufacturers, which are 4 pins: 5/8" to 1" in diameter, 2" to 3" long. Also, grease pumped into tube tends to stay in better and longer.

Main Pivot Tube (End View)

End view main pivot tube. Outer tube is 3 1/4" diameter, 5/16" thick. Inner tube is 2 1/2" diameter, 7/16" thick.

Berlon's **Extended Lip Scrap End Grapple Bucket** is great for all your heavy duty demolition and clean-up needs. The BELPK-6 Bucket comes standard with a 3/4" x 6" cutting edge, MPUF-1 mounting plate and powder painted black. **Berlon's Extended Lip Scrap End Grapple Bucket** is available in 60", 66", 72", 78" & 84" widths to suit your application. **Berlon builds buckets the way they should be built!**

Dimple Plate

Standard on all Berlon **Extended Lip Scrap End Grapple Buckets** is a heavy duty, reinforced dimple plate. With structurally formed and individually welded "dimples", the BELPK-6 provides unparalleled strength and durability.
