

Tree Shear Grapple Option

Part # TGRP

Features

- (2) 2 ½" x 6" Hydraulic Cylinders
- 3/8" NP Ports with 3/8" 2 Braid Hose
- 2 ½" x 2 ½" x ¼" Square Tubing Frame
- 3" x 3" x ¼" Square Tubing on Shear Back

Available for 12" or 20" Shears!

The **Grapple Option** for the Tree Shear is ideal for the operator who desires to hold the tree as it is cut. **Tree Shear Grapples** are also designed to allow the operator to carry the cut tree to another location. The **Tree Shear Grapple** is plumbed to open when the Tree Shear blades open and to close automatically as the shear blades close. The **Grapple** may, however, be operated on separate hydraulic circuits if the operator wants the shears and grapple to work independently. The grapple arms may be easily removed should the operator desire. When the arms and cylinders are removed, the frame of the **Grapple** becomes part of the brush guard!
